

### Geographic Profiling

**1. Geographic profiling:** Research has consistently revealed that offenders generally victimize areas they are familiar with, thereby concentrating on targets within their immediate environment. *Brantingham, P. J., & Brantingham, P. L. (1981). Environmental criminology. New York: Sage.*

### Witness / Victim Interviews

**2. Witness / victim interviews:** Using the Cognitive Interviewing Model helps the witness to mentally reconstruct the external and personal contexts which occurred at the time of the crime. The Cognitive Model may lead to increased accurate memory retrieval due to the efficiency of effective retrieval and skill of the interviewer. *Memon, A., & Higham, P. (2008). A Review of the Cognitive Interview. Psychology, Crime and Law, 5 (1-2). DOI: 10.1080/10683169908415000 [Sent in by Beth Price, BSc Criminology, University of Derby]*

### Crime Linkage

**3. Crime linkage:** An offender's behaviour must be similar enough that it can be recognised across a series of offences and distinctive enough that it can be distinguished from other offenders' behaviour (Woodhams & Bennell, 2014), in order for crime linkage to work effectively. *Woodhams, J., & Bennell, C. (Eds.) (2014). Boca Raton, FL: CRC Press. <https://doi.org/10.1201/b17591>*
